

## VOLVO PV 444/544 OIL FILTER ADAPTOR

### FITTING INSTRUCTIONS

**Please** read all the instructions before starting work on your car.

The kit contains:

- Large diameter rubber seal
- Small o-ring
- Aluminium adaptor plate
- Extension bolt
- Cannister bolt 948
- Oil filter

Remove the filter bowl and the old filter. Remove the filter bowl retaining bolt and the large seal around the edge of the filter head. Clean out the groove in the filter head thoroughly.

Fit the new large rubber seal supplied with this kit in the groove in the filter head. Place the smaller rubber o-ring around the flange in the aluminium adaptor plate. Screw the extension bolt supplied into the block and tighten carefully. Then insert the cannister bolt in the hole in the adaptor plate and position making sure that none of the seals has moved. Screw the cannister bolt into the extension bolt and tighten using the correct spanners or sockets (we recommend the use of Loctite). Be careful not to over-tighten.

You are now ready to fit a spin-on filter to your Volvo. Use a Crosland 657, Mann W916/1 or similar high quality filter. Don't forget to grease the oil seal in the filter before fitting. Observe the manufacturer's change intervals.
