

JENSEN 541R, A135 OIL FILTER ADAPTOR FITTING INSTRUCTIONS

Please read all the instructions before starting work on your car.

The kit contains:

- Large diameter rubber seal
- Small o-ring
- Aluminium adaptor plate
- Extension bolt
- Cannister bolt
- Oil filter

(This diagram is for illustration purposes)

Remove the original filter bowl and its sealing ring (which may be stuck in the filter head). Fit the large diameter o-ring supplied into the groove in the filter head.

Remove the central splash plate (a large steel “washer” and the felt washer if one is there).

Fit the smaller o-ring into the filter head and place the adaptor plate in position. Screw in the adaptor bolt and extension by hand. Using a 1" AF socket tighten the adaptor bolt fully (but do not over tighten).

When fitting a new spin-off filter always fill it with oil before screwing it on to the adaptor. Always check for leaks after fitting a filter and after fitting the adaptor for the first time.

Use a Mann W940/1, or similar oil filter. Remember to grease the square seal on the filter before fitting.
